8 October 1963

MEMORANDUM FOR THE RECORD

25X1A

Meeting - 17 September 1963 - [REDACTED]

PURPOSE: To discuss computer interface, programming and equipment design.

25X1A

ATTENDED BY: [REDACTED]

The computer interface question was discussed at length and a dividing line between the 490 and special computer hardware was established. Other decisions made were that the free-running mode would be eliminated, a possible $\pm 1/8$ " paper shift may occur over the 60" table area and was OK'ed, thirty inch paper will run across the center of the 60" surface, and a floor to ceiling rack would be provided. We will tap cool air from the building air conditioning system - which is piped through at 42° at 50% Rel. Hum.

25X1A

25X1A

Since the plotter will be located away from the 490, a 75' cable will have to be provided by [REDACTED]. The type connector, pin assignment and *pin* impedance will have to be furnished [REDACTED].

Space requirements - a minimum of 8'x8'x3' plus floor to ceiling electronics rack.

Equipment will be 208V, three phase and will have a peak load of 15-20 amps.

25X1A
